

CLNE Central Advance

Predilute Hygiene System

The CLNE Central Advance predilute hygiene system range is the ultimate solution for the precise control of chemical titration across your whole installation. The range allows for up to 24 simultaneous users, with no limit to the total number of satellites.

- Chemical titration can be precisely set between 0.5% and 6%.
- Utilising Grundfos IE5+ pump technology, the Central Advance offers class leading energy efficiency and longevity.
- Consistent cleaning performance across your installation is guaranteed, thanks to a single, centralised point of chemical titration.
- Removes the need to have chemicals inside manufacturing spaces, thereby reducing manual handling, avoiding COSHH restrictions and eliminating lengthy start up times.
- Fixed, factory-wide chemical titration reduces workload on the QA team and streamlines the audit process.

	Central Advance 40-10	Central Advance 80-10	Central Advance 240-10
Simultaneous users	5	10	24
Chem. titration range	0.5% - 6%	0.5% - 6%	0.5% - 6%
Water consumption	40l/min	80l/min	240l/min
Electrical requirement	400VAC 3~ 32A		
Dimensions (L x W x H)	1,200 x 685 x 1,420mm
